

ReadMe for Replication Materials for “Is a Polarized Party System a Too Extreme Party System?”

September 10, 2022

This document details the files needed to replicate the analyses in the manuscript “Is a Polarized Party System a Too Extreme Party System?”. Analyses were conducted in R and Stata 15 with plots produced in the former. Syntax/script files take it for granted that there is a common Data directory (“./Data/”) from which data is being read and the outputs of the Stata analyses are then read for subsequent importing into R.

Data Files

The following data files are provided:

- `pew_cnn_comb.Rda` / `pew_cnn_comb.csv` / `pew_cnn_comb.dta`
 - These files contain the individual level survey responses from the Pew and CNN surveys analyzed in the manuscript.
 - R, Stata, and CSV versions are provided.
- `lucid_coded_all.dta` / `lucid_coded_all.Rda`
 - The Lucid data in either Stata or R data format
- `toplines.xlsx`
 - Provides the survey top lines for % saying either party is too extreme as reported on Roper iPoll. Used in creating Table OA1.

Syntax Files

- Figure 1
 - `Figure1.R`: Creates Figure 1 from in-text.
- Figure 2
 - `Figure2.R` & `Figure2_pewcnn_mlogit_analyses.do`
 - The Stata do file performs the multinomial logit analyses presented in Figure 2, while the R script file creates the plot.
 - The Stata file needs to be run first to generate the underlying data for the plot.
- Figure 3
 - `figure3_analyses.do`: Stata do file focused on the multinomial logit models and creation of predicted probabilities
 - `Figure3.R`: Creates the figure
- Figure 4

- figure4_analyses.do: Stata do file focused on creating the estimates reported in the figure
 - Figure4.R: Creates the figure
- Figure 5
 - Figure5.R: Creates Figure 5
- Figure 6
 - Figure6.R: Creates Figure 6
- Figure 7
 - Figure7_datacreation.R: This creates a series of Stata data-files in long format for subsequent analyses
 - figure7_analyses.dta: This performs the analyses in Stata
 - Figure7_figure.R: This creates the figure in R
- Online Appendix A
 - Most of the contents of this appendix are created via the syntax/script files above.
 - table_oa1.R: Creates Table OA1
- Online Appendix B
 - figure_ob1.R: Creates Figure OB1
 - figure_ob2.R: Creates Figure OB2
 - figure_ob3_analyses.do & figure_ob3.R: Former file runs the logit models and saves predicted probabilities, latter plots them; former file also creates the regression tables
- Online Appendix C
 - figure_oc1_oc2.R: Creates Figures OC1 & OC2
- Online Appendix D
 - online_appendix_d_stm.R: Performs the STM analyses and creates the plots reported in text
- Online Appendix E
 - appendix_oe.R: Script for all of the figures, although it relies on the outputs of the Stata .do files listed below, so those should be run first.
 - figure_oe3_analyses.do: Analyses underlying Figure OE3
 - figure_oe4_analyses.do: Analyses underlying Figure OE4
 - figure_oe5_analyses.do: Analyses underlying Figure OE5
